

Windows Update Fixer

Update Fixer is a lightweight, freeware app to automatically fix Windows Update.

This program is an automatic **Windows Update Fixer**, but we couldn't actually use that name, because Windows is Microsoft's trademark and obviously we are not Microsoft. Therefore, our program is called **Update Fixer**. It's a free Windows Update fixing tool.

Why does Windows Update fail?

There can be many reasons why Windows Update fails, such as:

- System services relating to Windows Update have been disabled or misconfigured.
- The Windows Update delivery files are corrupted or locked.
- Certain system directories are corrupted or missing.
- Settings relating to Windows Update are incorrect in the Windows system registry.

Unfortunately, Windows Update often displays unhelpful error messages. For example, Windows Update failing because error **0x800705b4**, **0x80070424** or **c0000022**. These Windows Update error codes do not usually help much in fixing Windows Update.

Other common problems are when you experience Windows Update stuck at 100 percent or Windows 11 Update stuck anywhere between 0% and 100%, or, Windows 11 updater not working at all.

Windows comes with the official Windows Update Troubleshooter but it often fails to fix anything. There are also scripts designed to fully reset Windows Update, but they do not always work. Also, a script that resets everything is a hammer but sometimes what you need is a precision tool.

These are the reasons why we developed Update Fixer. We want to help you to fix Windows Update, easily.

Fix Windows Update

Update Fixer is a lightweight, no-nonsense program that does only one thing, but it does it very well: It fixes Windows Update. Nothing more, nothing less.

Screenshots

This is how the program looks like in Windows with Dark Mode:

Screenshot 1 - The main app screen.

Screenshot 2 - The program showing what is wrong with your Windows Update and what it recommends you to do. These options are presented based on analysis of your computer.

Screenshot 3 - After Update Fixer is done, all you need to do is restart the computer and your Windows Update is fixed!

Here is a video showing how Update Fixer can fix Windows Update when the official Windows Update Troubleshooter fails:

Key Features

1. Automatically detects what is wrong with Windows Update.
2. Automatically fixes any found Windows Update related problems.
3. If you want, you can choose exactly what fixing operations should be done.
4. Supports Dark Mode.
5. Very easy to use: Start the app, click a button. That's it!
6. The user interface includes cats 🐱
7. Free and [open source](#). Lightweight. No ads, no bundled software, no nonsense.

Download

Update Fixer is a lightweight, portable app for Windows.

A portable app means that you have one Windows executable file that you can simply copy to any system you want and run it there. When you are done, you can just delete the file, there is no other type of uninstallation required.

[Click here to download portable Update Fixer](#)

Update Fixer works in Windows 11, Windows 10, Windows 8, Windows 7 and Windows Vista.

Change Log

Version 1.3

- Improved user interface to display all the data without the need for multiple scroll bars.
- Fixed the program not starting due to expired certificate.

Version 1.2

- The app window can now be resized in its results show view.

Version 1.1

- Minor bug fixes.

Is your Windows Update failing?

Keeping your Windows up-to-date is critically important for your computer's security, stability and performance. If your Windows Update is failing, you are putting your
